PROFESSIONAL SUMMARY

Final-year Computer Science undergraduate (B.Tech, 2027) with hands-on experience building **scalable, reliable, AI/ML-integrated** full-stack applications using **Java, Python, and the MERN stack**. Delivered **two end-to-end SaaS-style projects** covering RESTful API design, database modeling, and applied machine learning, from an AI-driven job-matching platform to a real-time livestock disease detection system. Strong **analytical thinking, logical reasoning, and communication skills**, with active LeetCode practice, seeking to contribute as a Trainee Software Engineer.

TECHNICAL SKILLS

Programming Languages: Java, Python, C++ (Intermediate), JavaScript (Basics)

AI/ML: scikit-learn, NumPy, Pandas, OpenAI API — applied machine learning & AI-driven feature development

Web Development: React.js, Node.js, Express.js, RESTful API Design (Intermediate), HTML5, CSS3

Databases: MongoDB, SQLite — schema design for scalable, reliable data models

Tools & Platforms: Git, GitHub (version control & collaboration), VS Code, Google Colab, Postman, LeetCode

Core Competencies: Analytical Thinking, Logical Reasoning, Problem-Solving, Communication, Remote Collaboration

PROJECTS

CareerGap Analyzer – AI Job Finder *MERN Stack · OpenAI API*

- Built a scalable, SaaS-style full-stack platform that analyzed user profiles and experience history, reducing manual career-gap review effort by **an estimated 40%** through automated skill-gap detection
- Integrated the **OpenAI API** to generate AI-driven, personalized job-matching recommendations, turning raw profile data into actionable career guidance for end users
- Built and documented **10+ RESTful endpoints** in Node.js/Express, enabling the React frontend to fetch and update user profile, skill, and job-match data reliably under concurrent multi-user testing
- Architected a normalized MongoDB schema across **5+ linked collections** (user profiles, skills, job postings), cutting duplicate query logic and reducing average API response time for gap-matching queries by **~30%**

AI-Based Livestock Disease Detection *Python · Flask · scikit-learn · Bootstrap · REST APIs*

- Trained a scikit-learn classifier achieving **~85% accuracy** on livestock sensor data, flagging at-risk animals an average of **6-12 hours before visible symptoms appeared**
- Trained and deployed scikit-learn classification models to detect livestock health anomalies from sensor readings, applying **NumPy and Pandas** for data preprocessing
- Built a scalable Flask REST API backend paired with a responsive Bootstrap frontend, delivering a reliable, easy-to-use tool for non-technical end users

EDUCATION

Parul University, Vadodara — B.Tech, Computer Science & Engineering 2023 – 2027 (Expected)

CGPA: 7.15 / 10

Adarsh Junior College — Higher Secondary (Science) 2020 – 2022

Aggregate: 87.50%

Shree Saraswati Bhavan High School — Secondary School 2019 – 2020

Aggregate: 88.60%

CERTIFICATIONS & ACHIEVEMENTS

- Generative AI Certification — OutSkill
- PU Code Hackathon 3.0 — Certificate of Participation (Jan 2026)
- AESTR Alpha AI Summit — Certificate of Achievement & Certificate of Participation (Feb 2026)
